FHI 059, Version 13

Additional Case Information:

No dead, moribund or lethargic fish observed. Small number of fish observed deeper in the water with physical damage, attibuted to post treatment.

Treatments have been targeted to cages that have had numbers above TSSC treatment threshold, rather than treat the whole site. All recent treatments have been hydrolicer, with only SLICE being used earlier in the cycle. Site stocked with wrasse (wild caught) and along with targetting specific cages, this has reported to have helped the management of sea lice so far this cycle.

No recent issues reported on site, fish sampled for VMD appeared healthy.

Visibility good at time of inspection and fish observed shoaling deeper in the water.

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO FB0169 SITE NO FS0767 INSPECTOR DATE OF VISIT09/12/2020SITE NAMETarbert SouthCASE NO20200379

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

The above site was visited in accordance with the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015.

Samples were taken to be analysed for veterinary residues.

The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated.

Medicine records were inspected and found to be adequately maintained.

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed:

Date: 21/12/20
