FHI 059, Version 13

Additional Case Information:

Sealice treatment aboard well boat (Ronja Superior, 22/06/2020) Azasure, whole site treated but only cage 6 had increased mortality attributed to this. Fish were held for 3.5 hours. 13,699 attributed purely to treatment in cage 6. Fish did not react well to treatment, maybe due to stressful sweep and CO2 levels was slightly higher in well reportedly caused by worsening weather conditions. Fish in well appeared blue and stressed on discharge. Mortality was increased in 3 days post treatment then returned to background level. Fish health manager took samples and tested for CMS and HSMI, both results came back as negative.

Cages 1 and 4 treated with Azasure in fully enclosed tarpaulins and cage 5 treated with Azasure on well boat. Lice treatments only undertaken on these cages as adult female lice numbers were not so high on others cages

New thermolicer to arrive at start of new year. It will operate all around Scotland.

Some caligus on site but very few Leps.

Slice treatments synchronised with other site in the area. Bath treatments not synchronised

Treatment intiated on individual cages once the lice count hits average of 0.01 adults females per fish.

Currently no AMA in place as regional manager recently left and there was no body to conduct meetings between the two companies. In the meantime Greig and SSF have written up FMS's and are willingly sharing those between each other. Once new regional manager starts a new AMA will be drawn up. Reportedly, sealice data currently shared with Grieg on a weekly basis.

10-15 metre lice skirts on at moment. Reportedly more effective at reducing lep numbers than caligus.

Remote inspection carried out by on 11/09/2020 via Microsoft Teams

Site inspection and sampling by

No issues noted on site, fish shoaling well and fish sampled for VMD appeared healthy.

Site reported that plankton levels have been lower so far this year and gill health has been good so far. Smolts reportedly came in from Barcaldine ~200g.

SSF have implemented a very low trigger level for sea lice, 0.01, 100 fish counted per cage per week, trigger is 1 adult female for a cage. Treatments are targetted to specific cages that reach the treatment level.

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO FB0125 SITE NO FS0850 INSPECTORS
 DATE OF VISIT
 17/09/2020

 SITE NAME
 Lippie Geo

 CASE NO
 20200381

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected in accordance with the Aquatic Animal Health (Scotland) Regulations 2009, and to meet the requirements of European Community Council Directive 2006/88/EC.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as medium. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every second year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Scotland were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed:

Date: 22/12/20

Fish Health Inspector

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Marine Scotland website at https://www.gov.scot/publications/fish-health-inspectorate-service-charter/
