**Additional Case Information:**

Mortalities above 1% since input:

18/5 - 11.01% - Human error during wellboat treatment which resulted in low oxygen levels causing mass mortality.

24/08 - 1.47% - Post-treatment losses

05/10 - 2.94% - Post-treatment losses

12/10 - 8.07% - Post-treatment losses

26/10 - 1.11% - Post-treatment losses

Live haul harvests taken to Arnish processing plant.

Very few moribunds observed across the site. Few fish hanging around the surface and those that were had recently been passed through the hydrolicer. Majority of fish were sitting deep in the water so difficult to observe.

Hydrolicer was on site during inspection. Site began treating last week and are expecting to be finished by the end of this week. Manager reporting good clearance of lice; ~93%.

Divers were also on site during inspection checking the nets for damage.

Fish for VMD appeared healthy and had a good feeding response.

Site thermomemnter used as inspectors required re-calibration.
