Additional Case Information:

#### Issued by: FHI

LUM imported from Ireland for this cycle (2020), not planning to do this in the future

Above CoGP 2021 wk 22 0.75AF, all other weeks below and generally very low

Recent plankton samples showed high levels of Chaetoceros socialis, struggling this week to catch fish for lice counts as fish are staying very deep in the water.

Hoping not to treat prior to fallowing the site, only 3 cages remaining. Harvest is currently planned once a week but if lice figures increased further this could be expedited and could possibly empty site in the space of a week. Gills slightly compromised, which is another factor site being considered with regards to treatments.

Only operator in CoGP management area.

Cleaner fish observed on site, salmon deeper in the pens and at times challenging light conditions resulting in decreased visibility. No moribund or lethargic fish observed. Fish sampled for VMD appeared healthy and in good condition.

Cleaner fish mortality records: Mortality in last 4 weeks between 51-83 per week for the entire site for both wrasse and lumpfish. Increase in mortality from wk 29 2020 until week 41 2020 with a peak in mortality in wk 35 2020 at 2,364 morts. Largely mortalities are attributed to treatments for lice and AGD. Some mortalities of lumpfish believed to be attributed to increased water temperatures.

Database entry records mortalities by different species but exports from the database don't reflect this. Company who provided the database is currently working on improving this.

Paperwork completed remotely on 4/6/2021 by shadowed by set. Physical site inspection on 9/6/21 by set.

# FISH HEALTH INSPECTORATE VISIT REPORT

# SUMMARY FOR INFORMATION OF SITE OPERATOR

 BUSINESS No
 FB0125

 SITE NO
 FS0546

 CASE NO
 20210183

DATE OF VISIT09/06/2021SITE NAMENevis C (Ardintigh)INSPECTORInspector

# Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

### Records

The surveillance frequency category of the site was assessed as medium. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every second year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

No mortality levels exceeding the reporting criteria have been recorded since the last inspection.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Scotland were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

# Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

### Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed:

Date: 16/7/21

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Marine Scotland website at <u>https://www.gov.scot/publications/fish-health-inspectorate-service-charter/</u>
