Additional Case Information:

Smolts came on from Sallachy Site (FS0887) and Quoys Hatchery (FS0476) in April 2020.

Fish have been vaccinated with Alpha Ject micro1 PD and Alpha Ject Micro 6

FW wellboat treatment in August and December 2020. Hydrolicer was on site in July 21 and the thermolicer was on site in August 21. No medicinal treatments have been required since input.

All mortalities are transferred to Doon Bay in sealed bins where they are collected by a Cooke road lorry and transferred to Pelagia in Bussy, Shetland where they are ensiled.

Deadhaul harvests are taken to Kirkwall procesing plant within the disease management. No discharge into the DMA.

Sites within FMA are not fallowed synchronously on a single year class basis, but there is a documented risk assessment for this which was made available during the inspection.

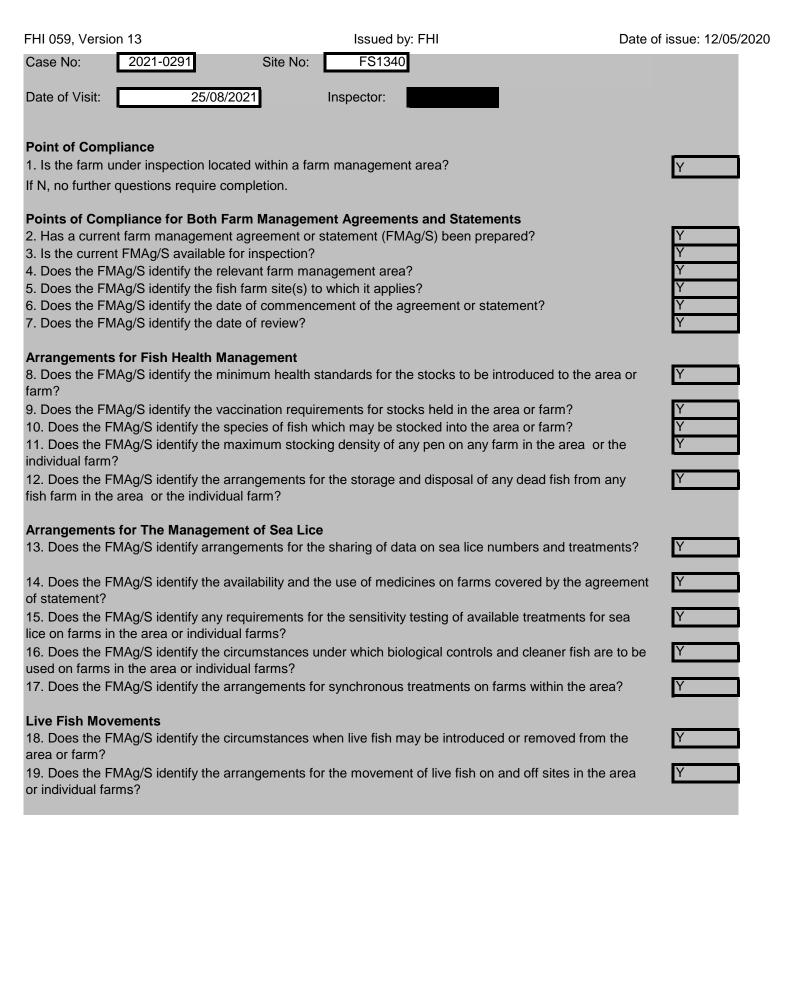

Fish on site appeared in good health at the time of inspection. No moribunds were observed across the site.

Fish sampled for VMD appeared healthy.

Case completion report

Recommendations in relation to the above case were made for implementation by 27th September 2021. Following submission of the required documentation, evidence has now been provided to Marine Scotland to demonstrate that the recommendations have been implemented.

This case will now be closed. This site may be subject to further audit and recommendations in the future.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

 CASE No
 20210291

DATE OF VISIT25/08/2021SITE NAMEMill BayINSPECTORInspector

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as low. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every third year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

No mortality levels exceeding the reporting criteria have been recorded since the last inspection.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Scotland were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

The farm management agreement was inspected and it was found that the site was not managed and operated in accordance with the farm management agreement. It was noted that the prohibited movement of fish out with the disease management area as described in the farm management agreement did not reflect the current practice on site. Either the site must be operated in accordance with the farm management agreement or the farm management agreement must be updated to reflect the current practices on site to ensure compliance with the legislation.

Please ensure that these points have been addressed by 29th October 2021. Records or documentation demonstrating that these points have been addressed should be sent to the Fish Health Inspectorate (contact details below). The site may be subject to further inspection or enforcement action should the appropriate action regarding the above points not be taken within the time period stipulated.

Please contact myself or the duty inspector should you require any assistance or clarification in implementing any requirement or recommendation detailed in this report.

Signed:

Date: 30/08/2021
