Dead/weak/abnormally behaving a Clinical signs of disease observed Gross pathology observed? Diagnostic samples taken?	•	N If yes, see additional infor	mation/clinical score sheet. mation/clinical score sheet. mation/clinical score sheet.
UNI/REG only - if unable to carry	out intended visit detail re	eason below:	

Additional Case Information:

Fish came on from Yetts O' Muckart in October 2021 and have been doing well since the transfer. Company vet visited the site in November and December for post-transfer health checks and reported that the fish were in good physical condition and demonstrated an excellent feeding response. Gills were also in good health.

Site is used as a nursery site where fish can be on-grown before transfer to other sea sites where they are grown to harvest size

No disease issues on site, but site manager has reported an increase in the observation of lice on the site. Fish were treated with Slice and Salmosan in January 22 to reduce loads. Site manager reported that both treatments had good clearance rates, but expected further treatments would be necessary throughout the cycle to maintain low levels.

Seals and cormorants are present in high numbers in the vicinity around the site. Cages are equipped with sapphire nets and tensioned top nets to deter predators.

FMA is not fallowed synchronously on a single year class basis, however there is a risk assessment in place for this which was inspected and found to be satisfactory.

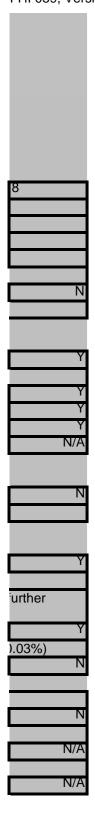

Fish were sitting deep in the water so were difficult to observe. A handful of moribunds were observed across the site but didn't display any clinical signs of disease so were not sampled for diagnostics. 2 mortalities were also noted across the site. The population of fish in the cages otherwise appeared healthy and in good condition.

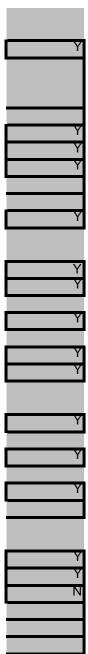

Fish sampled for VMD appeared healthy externally and internally and demonstrated a good feed response.

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

 Business No
 FB0095
 Date of Visit
 01/03/2022

 Site No
 FS0031
 Site Name
 Pegal Bay

 Case No
 20220037
 Inspector

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as low. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every third year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

No mortality levels exceeding the reporting criteria have been recorded since the last inspection.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Scotland were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed: Date: 07/03/2022
Fish Health Inspector

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Marine Scotland website at https://www.gov.scot/publications/fish-health-inspectorate-service-charter/
