Additional Case Information:

Records inspected remotely on 22/03/2022 by [REDACTED].

AGD confirmed on site by PCR in 2022 but does not appear to be causing issues currently.

Fish difficult to see as they were remaining deep in the water. Those visible were shoaling as expected and appeared in very good condition with no moribund/lethargic fish observed during inspection. Fish taken for VMD sampling appeared in good health upon internal examination.
