**Additional Case Information:**

Remote inspection on 19/05/2022.

The site experiences a challenge with Caligus during the summer, managed with Slice at input and freshwater treatments are now also available since last summer. Adult female counts are currently 0 but the site has been above 2 in previous cycles - this data was shared with the FHI at the time.

Wild caught wrasse from Scotland.

During the site inspection, the main population of fish looked healthy and feeding well, with no moribunds or dead fish seen in the pens. The fish sampled for the VMD had small numbers of Caligus present, but the site is aware and currently treating with Slice. No gross pathology observed.
