Additional Case Information:

No peaks in salmon mortality for period checked. Lumpfish peaks in mortality 2022 wk 49 94769 (53.13%) storm damage. Also some elevated mortalities post input. 2023 wk 7 2109 (1.99%) storm damage, runts and without diagnosis. Wk 8 1478 (1.43%) storm damage, runts and without diagnosis.

The lumpfish mortality (53.13%) was following three days of severe storms, no issues with the salmon. All pens affected. No issues prior to this with significant lumpfish mortalities. No issues occurred due to storms since. This mortality event will be referred to APHA.

Peroxide treatments for AGD in three pens on the 13th Feb (small fish). Whole site beginning of December 2022 and 12 January 2023.

Bird nets have been adapted with smaller mesh around the base is attached to the net collar to prevent seal access.

Morts removed by ROV FOOVER on a daily basis. Double based nets.

Some runts observed in two pens.

No wrasse imports from Ireland since the last inspection but this is likely to continue this cycle so surveillance frequency will remain high.
