Site inspected in calm weather with good visibility. Stock were observed shoaling and responding positively to routine feeding regimes.

Four fish in cage 3 and three fish in cage 5 were observed as moribund / lethargic. No further clinical signs of disease were observed during the inspection. Fish sampled for VMD appeared healthy both externally and internally.

The site completed a cycle of Slice treatments at the end of May and are planning to conduct a further FW treatment scheduled to commence 10/06/2023.
