Additional Case Information:

IPN detected recently in routine health monitoring samples, but no elevated mortalities and no clinical signs observed. Mortalities removed daily by staff and monitor fish using cameras in cages. Divers on site monthly to conduct net checks. SLICE treatments of current cycle in April (5-11th), May (16-22nd) and July (11-17th). Plan to undertake hydrogen peroxide tarp treatment for AGD in August.

Take daily water samples (Monday-Friday) to monitor plankton. Samples sent to lab in Lerwick.

All stocks on site from Barcaldine, but a variety of ova sources (Fanad, Aquagen and Benchmark).

Fish sampled for VMD appeared healthy. Fish deep in water and difficult to catch even using box net.

Mortality and sea lice records completed remotely on 21/7/23, other paperwork and inspection completed on 25/7/23.
