#### **Additional Case Information:**

Mortalities had been low post input (week 11 2023) until week 26 with a peak recorded on week 27 with 1760 (0.32%), mortalities continued to be elevated with a second peak noted in week 32 of 2262 (0.42%) and week 33 2259 (0.40%), numbers had decreased but then had increased in week 36 and have continued to be elevated, mixed causes failed smolts, handling and AGD.

Morts for the last five weeks have been wk 40 8074 (1.47%), wk 41 13,503 (2.5%), wk 42 20,307 (3.85%), wk 43 30,186 (6.11%) and wk 44 21,975 (4.79%). Wk 45 6279, (1.45%) These are attributed to AGD.

AGD the only identified issue on site, two FW treatments have been administered, first in August and a second in November.

Wrasse mortalities last four weeks wk 43 111 (0.83%), wk 44 408 (3.09%), wk 45 8 0.06%), wk 46 10 (0.08)

Slice administered wk 31 due to increased caligus in July 2023 leps have remained low.

A number of lethargic fish were observed in the pens inspected, some lesions were also noted.

# FINAL FISH HEALTH INSPECTORATE VISIT REPORT

#### SUMMARY FOR INFORMATION OF SITE OPERATOR

 Business No
 FB0398
 Date of Visit
 15/11/2023

 Site No
 FS0853
 Site Name
 Lochmaddy

 Case No
 20230519
 Inspector

#### Results

The outstanding result for this case is:

**Virology:** Tissue samples were tested for the presence of infectious salmon anaemia virus (ISAV) by cell culture.

The result of this test was negative.

Please refer to the previous fish health report issued on 18/12/2023 for all other results.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed: Date: 09/01/2024
Fish Health Inspector

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Scottish Government website at Fish Health Inspectorate Service Charter - gov.scot (www.gov.scot)

# INTERIM FISH HEALTH INSPECTORATE VISIT REPORT

#### SUMMARY FOR INFORMATION OF SITE OPERATOR

 Business No
 FB0398
 Date of Visit
 15/11/2023

 Site No
 FS0853
 Site Name
 Lochmaddy

 Case No
 20230519
 Inspector

## **Section 1: Summary**

The site was inspected following reports of elevated mortalities occurring at the site, on inspection of stocks a number of lethargic fish were observed, five were removed for further examination and subsequent diagnostic sampling.

Histopathology examination revealed moderate gill pathology with amoebic gill disease (confirmed by qPCR) and pathology consistent with salmonid rickettsial septicaemia (SRS) (confirmed by qPCR). Two fish displayed in the musculature a few unknown structures resembling parasites.

One fish tested positive for infectious salmon anaemia virus (ISAV) by qPCR. Sequencing analysis confirmed this to be HPR0 (non-deleted type).

Gill samples tested positive for the gill related pathogens: *Paranucleospora theridion* and salmon gill poxvirus (SGPV).

Aeromonas sp. was identified on plates taken from kidney and gill material, the level and purity of growth would suggest that this bacterium would be implicated as the primary source of these lesions.

Vibrio sp. was identified on plates taken from kidney and lesion material but the level and purity of growth would not suggest that this bacterium would be implicated as the primary source of morbidity.

Please contact myself or the duty inspector should you require any further information, have any queries regarding this report or if any problems develop.

### Section 2: Case Detail

#### Observations

Mortalities on the site had been low post input until week 26 with a peak recorded in week 27 and a second in week 32. Numbers had remained elevated with an additional peak of 6.11% (30,186) recorded for week 43. The main cause was recorded as AGD.

On inspection of the site lethargic fish were noted in all pens inspected with some lesions evident, five were removed for diagnostic sampling.

All five fish had necrotic gills and the opercula of F2 and 4 were shortened. Lesions were present on the flanks of F1-3.

Internally the hearts of F3-5 were deformed with petechial haemorrhaging evident on the liver of F1 and 3. Splenomegaly was noted in F1-4 with yellow pseudo faeces in all fish. The tubules of the pyloric caeca of F2 were mauve in appearance and the kidney of F3-5 were swollen.

R09

#### **Samples**

Samples were collected from F1-5 fish according to the table below:

Fish number	Facility number	Species	Stage	Origin
F1-2	13	Atlantic salmon	1kg 2023 s1	Clachbreac
F3-5	6	Atlantic salmon	1kg 2023 s1	Clachbreac

#### Results

**Bacteriology:** Kidney and gill material from F1-5 and lesion material from F1-3 were inoculated onto appropriate media for the isolation of bacteria

The following bacteria were isolated:

- Aeromonas sp. (lesion F1 and 3, gill F1-5);
- Vibrio sp. (kidney F4, lesion F1 and 2).

Tissue samples of two fish were tested for segments of nucleic acid indicative of the presence of the pathogen specified below using real-time PCR (qPCR).

### Piscirickettsia salmonis

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F2	19.96	20.18	20.69	20.57	POSITIVE
F3	19.36	29.66	29.72	29.82	POSITIVE

**Virology:** Tissue samples were tested for segments of nucleic acid indicative of the presence of the pathogens specified below using real-time PCR (qPCR).

## Infectious salmon anaemia virus

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	-	-	-	-	Negative
F2	14.21	35.00	37.38	35.42	POSITIVE
F3	-	•	-	-	Negative
F4	-		ı	-	Negative
F5	-		-	-	Negative

Following the positive QPCR result for ISAV, the HPR region was sequenced. The ISA HPR type was determined to be HPR0 (non-deleted type).

### Salmon gill poxvirus

Fish Number	Endogenous control Cp value	Cp Values	Reported Result (PCR)

F1	18.44	23.41	23.38	23.37	POSITIVE
F2	19.71	22.46	22.47	22.48	POSITIVE
F3	19.08	34.17	34.32	34.76	POSITIVE
F4	18.39	23.83	23.79	23.86	POSITIVE
F5	18.76	26.41	26.40	26.29	POSITIVE

The samples tested negative for infectious haematopoietic necrosis virus (IHNV), infectious pancreatic necrosis virus (IPNV), salmonid alphavirus (SAV), viral haemorrhagic septicemia virus (VHSV) and piscine myocarditis virus (PMCV).

**Parasitology:** Tissue samples were tested for segments of nucleic acid indicative of the presence of the parasites specified below using real-time PCR (qPCR).

Neoparamoeba perurans (AGD)

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	18.44	24.31	24.27	24.42	POSITIVE
F2	19.71	29.41	29.41	29.47	POSITIVE
F3	19.08	28.46	28.79	28.86	POSITIVE
F4	18.39	25.99	26.05	26.09	POSITIVE
F5	18.76	28.45	28.45	28.28	POSITIVE

#### Paranucleospora theridion

Fish Number	Endogenous control Cp value	Cp Values			Reported Result (PCR)
F1	18.44	23.69	23.69	23.79	POSITIVE
F2	19.71	21.53	21.54	21.58	POSITIVE
F3	19.08	22.90	22.99	23.38	POSITIVE
F4	18.39	22.20	22.10	22.37	POSITIVE
F5	18.76	26.99	26.86	27.00	POSITIVE

Tissue samples from F1 and 4 were tested for the presence of Microsporidian parasites by PCR, the results of these tests were negative.

**Histology:** Tissue samples of gill, skin and skeletal muscle, heart, pyloric caeca, pancreas, hind gut, liver, spleen and kidney were taken from F1-5. The tissue samples were fixed in 10% neutral buffered formalin.

Histopathological examination revealed the following:

Gill: Filament hyperplasia and lamellar fusion moderate, multifocal (F1, F3, F4, F5) with necrosis, multifocal, mild and few round blue structures resembling bacteria that Gram-negative (likely *Piscirickettsia* sp.) and several amoeboic cells resembling *Neoparamoeba perurans* (F1, F4, F5), several basophilic epithelial inclusions (likely epitheliocystis) (F2, F3). F3 displayed some vascular disturbances. Lamellar telangiectasia (F1, F, F4, F5) and free blood among gill filaments (F5).

Skin & Muscle: F1 displayed mild, focal, dermatitis and F2 displayed presence of few round blue structures resembling bacteria that stained Gram-negative (likely *Piscirickettsia* sp.) and F3 bacteria. F1 and F4 few small areas of myositis with several unknown parasite-like structures.

Heart: Minimal myositis (F1, F3, F4) and necrotising and some nests of basophilic nuclei (F2). Mild, epicarditis (F2) with round blue structures resembling bacteria (likely *Piscirickettsia* sp.) (F2).

Gut and pyloric caeca: Peritonitis, mild, multifocal (F2, F3) with few round blue structures resembling bacteria (likely *Piscirickettsia* sp.).

Pancreas: Some autolysis observed in F5.

Liver: Hepatocellular necrosis, mild, focal (F1, F3), F5 displayed some hepatocellular vacuolation (macrovesicles).

Kidney: Ranging from some to mild, foci of reduced interstitial cell (haemopoietic) (F1, F4) and necrosis, ranging mild to marked, multifocal (F2) with few intracellular round blue structures resembling bacteria that stained Gram-negative (likely *Piscirickettsia* sp.). Some renal tubules display some hyaline droplets (F2, F5), Some renal tubule dilation observed F4.

Spleen: Necrosis, multifocal, mild and few intracellular round blue structures resembling bacteria that stained Gram-negative (likely *Piscirickettsia* sp.) (F2).

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.
