Additional Case Information:

Fish came on Nov 2023 - Just trout for this cycle as far as manager is aware. 6 Pens from Kinnaird. 3 from Frandy.

Mortality levels seem to be slightly higher in Frandy fish - nothing coming back on samples but hearts seems larger.

Last Salmon harvested out September 2023. Fish leave site dead. Been using the Nove Scotia (deadhaul) boat recently but this cycle they might use the harvesting equipment on shore.

Grumbling mortality - seems to be from failed fish changing from brackish water to this concentration of salinity.

Treatments this cycle: SLICE at start of Feb 2024 (7 days)

Is the only site in management area so isn't fallowed synchronously.

Latest health report: 7th March 2024 - no significant findings regarding tests (Aeromonas, Piscine orthoreovirus, IPN, moritella viscosa, SAV, PDV, yersinia ruckeri, PMCV or ternacibalum spp.) but an increase in the number of misshaped hearts could be observed.

Sealice: Lice levels increased just before the harvesting period in 2022 (2.74 in week 20) and 2023 (3.67 in week 32).

During physical inspection of the site fish appeared healthy, shoaling well and had good feed responses. Fish taken for the statutory ISA sampling had no lice on them and appeared healthy both internally and externally.

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

 BUSINESS NO
 FB0119
 DATE OF VISIT
 26/03/2024

 SITE NO
 FS0249
 SITE NAME
 Ardnish

 CASE NO
 20240100
 INSPECTOR

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected.

As the only active site within the Disease Management Area (DMA) and due to being stocked with rainbow trout, a thirty fish sample was taken to test for the presence of infectious salmon anaemia virus (ISAv). The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Samples

Thirty rainbow trout were tested for the presence of infectious salmon anaemia virus (ISAv). Samples were collected according to the table below:

| Fish Number | Pool Number | Facility Number | Stage | Origin |
|----------------|----------------|--------------------|----------------|-------------------|
| 1-5 | 1 | 5 | 1.324 kg adult | Frandy (FS0551) |
| 6-10 | 2 | 5 | 1.324 kg adult | Frandy (FS0551) |
| 11-15 | 3 | 5 | 1.324 kg adult | Frandy (FS0551) |
| 16-20 | 4 | 6 | 1.324 kg adult | Kinnaird (FS0508) |
| 21-25 | 5 | 6 | 1.324 kg adult | Kinnaird (FS0508) |
| 26-30 | 6 | 6 | 1.324 kg adult | Kinnaird (FS0508) |

All samples tested **negative** for ISAv.

Records

The surveillance frequency category of the site was assessed as low. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every third year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

R25

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had not been reported to the Fish Health Inspectorate. I would like to remind you of the industry agreement in relation to mortality reporting as detailed in A Code of Good Practice for Scottish Finfish Aquaculture.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Directorate were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

The following points were raised with the site representative during the inspection:

- Three mortality events in 2021 (Wks 33-35) have not been reported to FHI. A corrupt file at the time resulted in the missed reporting. Mortality notifications have now been submitted for these weeks. No further action required.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Fish Health Inspector

Date: 11/04/2024

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Scottish Government website at Fish Health Inspectorate Service Charter - gov.scot (www.gov.scot)
