Additional Case Information:

Last ECI 06/10/021 / last visit (DIA and REP) 22/11/2022

Mortality: Wk 48 and 49 2022 - 25,672 (7.33%) and 20,929 (6.45%) - AGD. FHI were out in wk47 for diagnostic. Wk 13 2024 9057 (1.33%) - delivery losses.

Salmon started coming on to site 16/03/2024. Salmon came from the hatchery with some fungus however that has cleared up well since being in seawater. No cleanerfish on site.

Last cycles treatment: Weekly optimase and tricane use for health checks. SLICE June 2022, Freshwater Aug 2022, Paramove in Oct and Nov 2022, Feb 2023. Salmosan March 2023, freshwater April 2023. AMX (alphamax) treatments July and August 2023.

Deadhaul harvest to Dingwall

Last health report is from the last cycle (October 2023) - PCRs - AGD and low level branchiomonas.

VMD - Pen 2 Clachbreac (FS0892)

In terms of containment: Weighted Seal pro nets, seal fence (collar), bird nets. Seal fence is tied to the top of the normal net.

Site is a deadhaul site so no live movements of fish during harvesting.

During the physical inspection, no moribunds were observed. Fish taken and sampled for VMD appeared healthy both externally and internally. Site staff and company biologist were carrying out health checks including gill swabs and lice counts while I was on site. All fish that I observed appeared healthy externally - a few scored low for AGD and a handful of caligus were observed over the 30 fish health checked.

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as low. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every third year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Directorate were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

R25

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice) and section 4A regarding fish farm management agreements and statements.

An enhanced containment inspection was conducted. A separate report will be issued in due course.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.
