Additional Case Information:

Fish came on from Loch Lochy in April 24 and have been vaccinated against Furunculosis and IPN. A mix of Fannads and stofinfisker stock. Large variation in weight at input but both stocks have been reported to be performing well since input with good feed intake and good growth. Site currently only stocks for 6 months before fish are moved off for ongrowing at other sea sites. No harvests are completed from Hellisay. Stock scheduled to be moved off to Loch Tarbert and Groatay in September for ongrowing to harvest, with the site being fallowed by October 24.

Mortalities above threshold since last inspection:

```
11/10/2021 - wk41 - 1.39% - 8,950 - Gill Diseases and PD 29/11/2021 - wk48 - 1.09% - 1,082 - CMS 05/09/2022 - wk36 - 2.35% - 11,352 - CMS 12/09/2022 - wk37 - 1.2% - 5,666 - CMS 19/09/2022 - wk38 - 6.38% - 29,680 - Gill infections / Jellyfish 03/10/2022 - wk40 - 11.84% - 29,280 - Gill infections / Jellyfish 10/10/2022 - wk41 - 1.65% - 2,468 - Gill infections / Jellyfish
```

New cohort of fish:

```
21/08/2023 - wk34 - 3.12% - 26,740 - AGD
02/10/2023 - wk40 - 2.6% - 20,840 - AGD
09/10/2023 - wk41 - 30.53% - 197,610 - AGD / Low oxygen
16/10/2023 - wk42 - 21.1% - 59,540 - AGD / Low oxygen
```

30/10/2023 - wk44 - 100% - 80,145 - AGD / Environmental - whole pen of fish lost due to low oxygen and bad weather combined with compromised gills. Only cage left stocked on site before fallow.

All mortality events were reported as required, however there were some discrepancies between site records and FHI records. These were a result of transfer losses and delays in final counts being received from the wellboat. Retrospective updates have been submitted and FHI records updated as required. NFA.

Health challenges last 2 crops were mainly AGD, exacerbated by environmental insults (Muggaeia atlantica from July followed by Apolemia uvaria in September). Fish will be gill swabbed every week and a FW treatments has been scheduled for July in anticipation of AGD developing on site.

SLICE treatment completed on 13th June 24. A 2nd SLICE treatment is planned for July.

Only site in DMA and CoGP MA.

Fish on site appeared in good physical health at the time of inspection and were active in the cages. One deformed and one moribund were observed in Cage 2 and were removed at the time for examination. No clinical signs observed so no diagnostic samples taken on this occasion. Fish removed for VMD were in good physical health and appeared clinically healthy externally and internally upon examination.

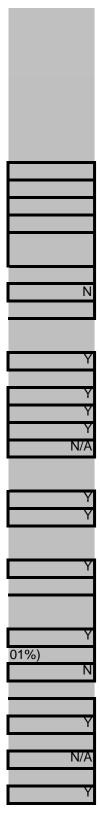

Sealice counts were observed on 2/3 cages. 20 fish per pen were removed for sampling. No leps were observed on any of the fish and 2 caligus were noted on the last fish from cage 1.

FISH HEALTH INSPECTORATE VISIT REPORT

SUMMARY FOR INFORMATION OF SITE OPERATOR

BUSINESS NO FB0119 DATE OF VISIT 25/06/2024
SITE NO FS1261 SITE NAME Hellisay
CASE NO 20240186 INSPECTOR

Inspection under the Aquatic Animal Health (Scotland) Regulations 2009

The above site was inspected, in accordance with the Aquatic Animal Health (Scotland) Regulations 2009.

All epidemiological units were inspected. On this occasion no samples were taken for disease analysis. The Inspector did not observe any clinical signs associated with the listed diseases as described in the Aquatic Animal Health (Scotland) Regulations 2009.

Records

The surveillance frequency category of the site was assessed as low. An inspection under the Aquatic Animal Health (Scotland) Regulations 2009 will be conducted every third year. The category of the site will be reassessed on a routine basis and updated as required.

The information required for the public record of aquaculture production businesses regarding this site was verified and where necessary updated. The following records were also inspected to ensure that the conditions of authorisation for your Aquaculture Production Business (APB) are being met:

Aquaculture animal and aquaculture animal product movement records were inspected and appeared to be adequately maintained.

Records in relation to aquaculture animals transported by the business were inspected and found to be adequately maintained.

Mortality records were inspected and found to be adequately maintained.

Mortality levels had exceeded the reporting criteria since the last inspection and had been reported to the Fish Health Inspectorate as required.

Reports detailing the results of animal health surveillance carried out by or on behalf of the business and/or Marine Directorate were available for inspection.

The biosecurity measures plan for the site was inspected and found to be adequately maintained and implemented.

Inspection under the Animals and Animal Products (Examination for Residues and Maximum Residue Limits) (England and Scotland) Regulations 2015

Medicine records were inspected and found to be adequately maintained.

Samples were taken to be analysed for veterinary residues.

Inspection under the Aquaculture and Fisheries (Scotland) Act 2007

The site was also inspected in accordance with the Aquaculture and Fisheries (Scotland) Act 2007, as amended, with respect to section 3 regarding parasites (sea lice), section 4A regarding fish farm management agreements and statements and section 5 regarding containment and escapes.

On this occasion the site was found to be satisfactory with regards to parasites, fish farm management agreements and statements and containment and escapes.

Please contact myself or the duty inspector should you require any further information or have any queries regarding this report.

Signed: Date: 01/07/2024

Fish Health Inspector

The Fish Health Inspectorate Service Charter detailing standards of service is available on the Scottish Government website at Fish Health Inspectorate Service Charter - gov.scot (www.gov.scot)
